

Digital Footprint

Information Powerpoint

Use the Digital Footprint presentation included in the resources pack to begin this subject focus. It will provide an overview of different types of data linked to digital footprint.

Video Activity

This is an activity based video and will help to consolidate learning from the powerpoint. Each task in the video provides learners with three different examples of data under a data category. Learners must identify the odd one out. You may need to pause the video at certain points to allow learners to discuss the answer.

Top Tip: Use individual white boards and ask learners to hold up their answers.

The Risks

Go through the Cyber Scams presentation with learners then use the Cyber Scams Statement activity to consolidate their learning. The answers are provided at the end of the worksheet.
